

Troubleshooting Log

1. Gmail connection failed → Reconnected Gmail credentials.
2. AI returned JSON as text → Added JavaScript parser using aiResponse extraction.
3. Update Row failed → Corrected row_number mapping.
4. Workflow regenerated old rows → Added STATUS column and IF node.
5. Pending row skipped → STATUS was blank; set it to Pending.
6. AI fields not separated → Parsed JSON into HOOK, LINKEDIN, INSTAGRAM, X, TIKTOK, YOUTUBE SHORTS, HASHTAGS and CTA.

Outcome: Automated AI content generation with status tracking.
